

D4.1 – Informations sites engagement plan

CONTENT

This document's main purpose is to offer tools, examples, and guidelines for involving people directly in the collaborative projects set up between Blue4All partners and various contributors and stakeholders. These projects focus on repairing and enlarging Marine Protected Areas (MPAs), Other Effective area-based Conservation Measures (OECMs), and their networks.

HIGHLIGHTS

Collaborating with various stakeholders is crucial for creating adequate tools and solutions based on science that address both social-economic (in Work Package 2 or WP2) and ecological and environmental issues (in Work Package 3 or WP3). Part of the collaboration is also coordinating and gathering data through practical experiments (in Work Package 4 or WP4). These experiments aim to test and implement the tools and solutions from WP2 and WP3 in real-world settings to manage MPAs/OECMs and their networks effectively and to provide solid conservation advice to coastal communities. We're introducing a set of tools and a plan for involving stakeholders that will be used by WP2, WP3, and WP4.
