

D4.2 Living Lab testing package

CONTENT

This deliverable functions as a comprehensive, step-by-step guide for project partners involved in the learning and testing processes within the Living Labs. It establishes a structured timeline and outlines the flow of all forthcoming interactions, aiming to facilitate efficient stakeholder engagement across multiple levels.

HIGHLIGHTS

The major interactions with the BLUE4ALL Living labs are explained:

- Mapping stakeholders and stakeholder analysis
- Establishing Stakeholder Engagement Groups (SEGs)
- Needs assessment
- Tool testing and validation

Contact Points are defined as the project partners responsible for coordinating stakeholder engagement in their associated Living labs (MPAs and MPA networks).

It is possible that the plan for interactions provided in the Living lab testing package would be slightly adjusted in the process.
